

2021 Native Prairie Seed and Plants

Native seed packets contain 39 native prairie species. This includes 7 grasses, 5 sedge, and 27 forbs. A composition list is available on our website on the tree program page. This mix is designed for part sun with 25-50% tree cover but can handle direct sun as well. Great for treed yards and edges. It will cover approximately 400 sq. ft. but, can be used to enhance areas that lack diversity if sufficient preparations are done.

Native Plant Kits contain 36 plants consisting of 6 species in six 6-packs. They are great as enhancements to existing or new restoration areas, butterfly gardens, rain gardens, borders, and natural areas. Also, kits can be used with a native seed mix to increase diversity and bloom time in a planting. Although these species are adaptable, keep in mind each species has a preferred habitat. There are a mix of sunlight preferences. Two kit options are available this year.

Moist Soil Garden Plug Kit: Culver's Root, Marsh Milkweed, New England Aster, Prairie Blazingstar, Zigzag Goldenrod, Great Blue Lobelia
Upland Soil Garden Plug Kit: Anise Hyssop, Showy Milkweed, Big leaf Aster, Stiff Goldenrod, Meadow Blazingstar, Columbine
